Candidates answer on the Question Paper.

No Additional Materials are required.

Paper 6 Alternative to Practical

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

At the end of the examination, fasten all your work securely together.

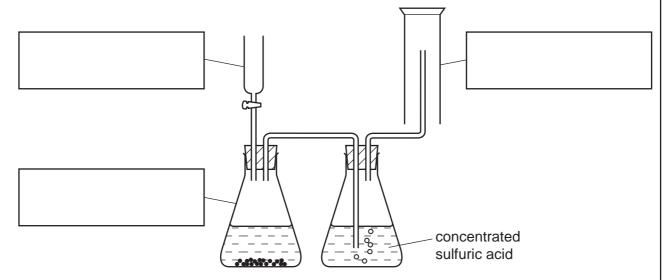

The number of marks is given in brackets [ ] at the end of each question or part question.

| For Examiner's Use |  |  |

| Total              |  |  |

This document consists of 14 printed pages and 2 blank pages.

1 The diagram shows the apparatus used to prepare a gas. The gas is more dense than air.

| (a) | Complete the boxes to name the apparatus. | [3] |
|-----|---|-----|
|     |   |     |

- (b) Identify one mistake in the diagram. [1]
- (c) Suggest a reason why the gas is passed through concentrated sulfuric acid.
  - .....[1]

[Total: 5]

| 2 | Three bottles  | of liqui | ids have | lost their | labels. |

| _ | 111100 2011100 | 09       |          |            | .000.0. |

The liquids are known to be:

aqueous sodium iodide,

hexene,

dilute nitric acid.

Outline chemical tests you could use to distinguish between the liquids in the three bottles.

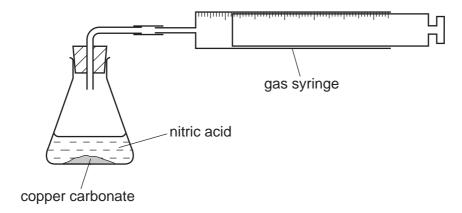

| liquid                | test | result |
|-----------------------|------|--------|
| aqueous sodium iodide |      |        |
| hexene                |      |        |
| dilute nitric acid    |      |        |

[6]

[Total: 6]

3 The speed of reaction between excess copper carbonate and dilute nitric acid was investigated using the apparatus below.

The temperature of the nitric acid was 20 °C.

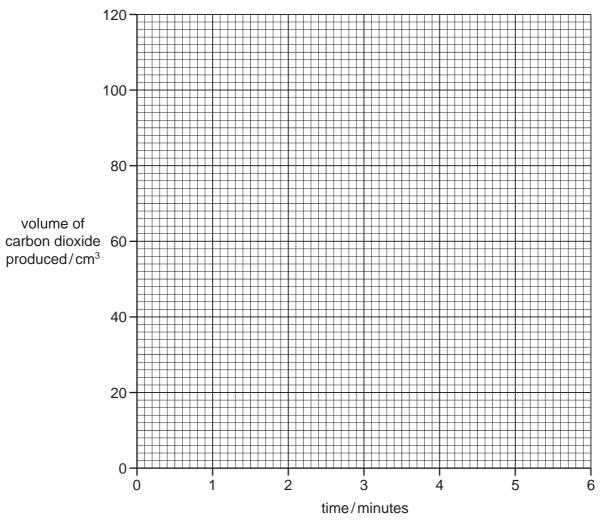

The volume of carbon dioxide produced was measured every minute for six minutes.

(a) Use the gas syringe diagrams to complete the table of results.

| time/minutes | gas syringe diagram          | total volume of carbon dioxide produced/cm <sup>3</sup> |
|--------------|------------------------------|---|
| 0            | 0 10 20 30 40 50 60          |   |
| 1            | 0 10 20 30 40 50 60          |   |
| 2            | 30 40 50 60 70 80 90 100<br> |   |
| 3            | 30 40 50 60 70 80 90 100     |   |
| 4            | 30 40 50 60 70 80 90 100     |   |
| 5            | 30 40 50 60 70 80 90 100     |   |
| 6            | 30 40 50 60 70 80 90 100     |   |

[4]

**(b)** Plot the results on the grid below and draw a smooth line graph.

| (c) Which point appears to be inaccurate? Explain why. |  |
|--|--|
|--|--|

......[2]

(d) Sketch on the grid, the graph you would expect if the experiment was repeated using nitric acid at a temperature of 60 °C. [2]

[Total: 12]

**4** A student investigated the reaction of aqueous sodium hydroxide with two different acids, acid **C** and acid **D**.

Two experiments were carried out.

#### Experiment 1

By using a measuring cylinder, 20 cm<sup>3</sup> of aqueous sodium hydroxide was poured into a conical flask and the initial temperature of the solution was measured.

A burette was filled with acid **C** up to the 0.0 cm<sup>3</sup> mark.

5 cm³ of acid **C** was added to the sodium hydroxide in the flask. The temperature of the mixture was measured.

Further 5 cm³ portions of acid **C** were added to the mixture in the flask, stirring with the thermometer until a total volume of 30 cm³ of acid **C** had been added. The temperatures after each 5 cm³ portion had been added were measured.

(a) Use the thermometer diagrams to record the temperatures in the table of results.

| volume of acid <b>C</b> added/cm <sup>3</sup> | thermometer diagrams          | temperature/°C |
|---|-------------------------------|----------------|
| 0   | 30                            |                |
| 5   | -  40<br>  -  35<br>    -  30 |                |
| 10  | 35                            |                |
| 15  |                               |                |
| 20  | 35                            |                |
| 25  | - 35<br>    - 30<br>    - 25  |                |
| 30  | 35<br>30<br>30<br>25          |                |

[2]

# Experiment 2

The burette was emptied and rinsed with water. Experiment 1 was repeated using acid **D**.

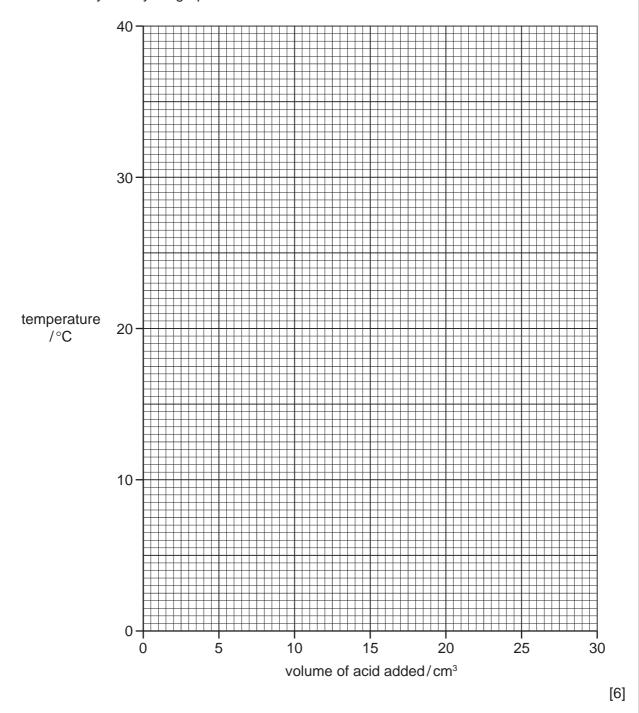

**(b)** Use the thermometer diagrams to record the temperatures in the table of results.

## **Table of results**

|   | T                            |                |
|---|------------------------------|----------------|
| volume of acid <b>D</b> added/cm <sup>3</sup> | thermometer diagrams         | temperature/°C |
| 0   |                              |                |
| 5   |                              |                |
| 10  | 30<br>    25<br>    20       |                |
| 15  | - 30<br>    - 25<br>    - 20 |                |
| 20  | 30<br>  125<br>  20          |                |
| 25  |                              |                |
| 30  |                              |                |

[2]

**(c)** Plot the results for Experiments 1 and 2 on the grid and draw two smooth line graphs. Clearly label your graphs.

(d) From your graph, deduce the temperature of the mixture when 3 cm³ of acid C reacted with sodium hydroxide in Experiment 1.

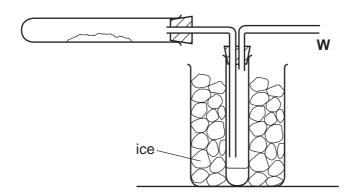

.....°C [2]

| (e) | (i) | Which experiment produced the larger temperature change?                                      |
|-----|-----|---|
|     |     | [1]   |
| (   | ii) | Suggest why the temperature change is greater in this experiment.                             |
|     |     |   |
|     |     |   |
|     |     | [2]   |
| (f) | Wh  | y was the burette rinsed with water in Experiment 2?  |
|     |     |   |
|     |     | [1]   |
| (g) |     | dict the temperature of the reaction mixture in Experiment 2 after 1 hour. Explain your swer. |
|     |     |   |
|     |     |   |
|     |     | [2]   |
|     |     | [Total: 18]   |

5 Solid E was analysed. E was an aluminium salt. The tests on the solid and some of the observations are in the following table. Complete the observations in the table.

|      |   | tests  | observations  |
|------|---|--|---|
| test | ts on   | solid E  |   |
| (a)  | (a) Appearance of solid E.  |  | white crystalline solid   |
| (b)  | <b>b)</b> A little of solid <b>E</b> was heated in a test-tube.                         |  | colourless drops of liquid formed at the top of the tube                |
| (c)  | A lit   | ttle of solid <b>E</b> was dissolved in distilled er.  |   |
|      | The solution was divided into four test-tubes and the following tests were carried out. |  |   |
|      | (i)   | To the first test-tube of solution, drops of aqueous sodium hydroxide were added. Excess sodium hydroxide was then added to the test-tube. | [3]   |
|      | (ii)  | Test (i) was repeated using aqueous ammonia solution instead of aqueous sodium hydroxide.  | [2]   |
| (1   | iii)  | To the third test-tube of solution, dilute hydrochloric acid was added, followed by barium chloride solution.                              | no reaction   |
| (1   | iv)   | To the fourth test-tube of solution, aqueous sodium hydroxide and aluminium powder were added. The mixture was heated.                     | effervescence<br>pungent gas given off<br>turned damp litmus paper blue |

[Total: 9]

| (a) | Indicate on the diagram, using an arrow, where heat is applied. | [1]   |
|-----|---|-------|
| (b) | The crystals change colour from to                              | [1]   |
| (c) | What is the purpose of the ice?                                 |       |
|     |   |       |
|     |   | [1]   |
| (d) | Why is the tube open at point <b>W</b> ?                        |       |
|     |   | [1]   |
|     | [Tota   | l: 4] |
