CENTRE NUMBER		CANDIDATE NUMBER	
CHEMISTRY			0620/32
Paper 3 (Extended	d)		May/June 2010

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 13 printed pages and 3 blank pages.

1		ead	ch of the following unfamiliar elements predict one physical and one chemical		
	(a)	cae	esium (Cs)		
		phy	sical property		
		che	mical property		
			[2]		
	(b)	var	adium (V)		
		phy	sical property		
		che	mical property		
			[2]		
	(c)	fluc	prine (F)		
		phy	sical property		
		che	mical property		
			[2]		
			[Total: 6]		
2		e hydrolysis of complex carbohydrates to simple sugars is catalysed by enzymes called rbohydrases and also by dilute acids.			
	(a)	(i)	They are both catalysts. How do enzymes differ from catalysts such as dilute acids?		
			[1]		
		(ii)	Explain why ethanol, C_2H_6O , is not a carbohydrate but glucose, $C_6H_{12}O_6$, is a carbohydrate.		
			[2]		
	(b)		w the structure of a complex carbohydrate, such as starch. The formula of a simple par can be represented by HO——OH.		

- (c) lodine reacts with starch to form a deep blue colour.
 - (i) In the experiment illustrated below, samples are removed at intervals and tested with iodine in potassium iodide solution.

Typical results of this experiment are shown in the table.

time/min	colour of sample tested with iodine in potassium iodide solution
0	deep blue
10	pale blue
30	colourless

	Explain these results.
	[3]
(ii)	If the experiment was repeated at a higher temperature, 60° C, all the samples stayed blue. Suggest an explanation.
	[1]
	[Total: 10]

- 3 The following are examples of redox reactions.
 - (a) Bromine water was added to aqueous sodium sulfide.

$$Br_2(aq) + S^{2-}(aq) \rightarrow 2Br^{-}(aq) + S(s)$$

(i) Describe what you would observe when this reaction occurs.

.....

.....[2]

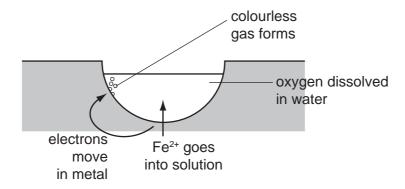

(ii) Write a symbol equation for this reaction.

......[1]

(iii) Explain, in terms of electron transfer, why bromine is the oxidant (oxidising agent) in this reaction.

.....[2]

(b) Iron and steel in the presence of water and oxygen form rust.

The reactions involved are:

reaction 1

$$Fe \rightarrow Fe^{2+} + 2e^{-}$$

The electrons move through the iron on to the surface where a colourless gas forms.

reaction 2

$$Fe^{2+} + 2OH^- \rightarrow Fe(OH)_2$$

from water

reaction 3

......Fe(OH)
$$_2$$
 + O $_2$ +H $_2$ O \rightarrow Fe(OH) $_3$

The water evaporates to leave rust.

	5	
(i)	What type of reaction is reaction 1 ?	[1]
(ii)	Deduce the name of the colourless gas mentioned in reaction 1 .	
		[1]
(iii)	What is the name of the iron compound formed in reaction 2 ?	
		[1]
(iv)	Balance the equation for reaction 3 .	
	Fe(OH) ₂ + O ₂ +H ₂ O \rightarrow Fe(OH) ₃	
	2	[1]
(v)	Explain why the change $Fe(OH)_2$ to $Fe(OH)_3$ is oxidation.	
		[1]
(vi)	Explain why iron in electrical contact with a piece of zinc does not rust.	
		[3]
		[Total: 13]
But-1-e	ne is a typical alkene. It has the structural formula shown below.	
	$CH_3 - CH_2 - CH = CH_2$	
The stru	uctural formula of cyclobutane is given below.	
	$H \longrightarrow C \longrightarrow C \longrightarrow H$	

For Examiner's Use

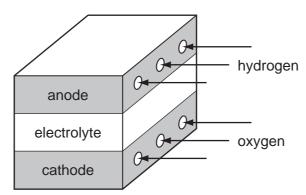

(i) Define the term isomer.

(a) These two hydrocarbons are isomers.

((ii)	Draw the	structural	formula	of another	isomer	of but-1-ene.
۱	("")	Diaw the	Structural	IOIIIIIIII	or arrotrici	13011101	of but 1-clic.

			[1]
	(iii)	Describe a test which would distinguish between but-1-ene and cyclobutane.	
		reagent	
		result with but-1-ene	
		result with cyclobutane	
			[3]
(b)	Des	scribe how alkenes, such as but-1-ene, can be made from alkanes.	
			[2]
(c)	Nar	me the product formed when but-1-ene reacts with:	
	bro	mine,	[1]
	hyd	lrogen,	[1]
	stea	am	[1]
		[Total:	11]

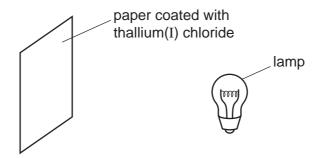

5 Fuel cells are used in spacecraft to produce electrical energy.

(a)	a) How is oxygen obtained from liquid air?				
/I- \		[2]			
(b)	Нус	lrogen and oxygen react to form water.			
		$2H_2 + O_2 \rightarrow 2H_2O$			
	(i)	Give an example of bond breaking in the above reaction.			
		[1]			
	(ii)	Give an example of bond forming in the above reaction.			
		[1]			
	(iii)	Is the change given in (i) exothermic or endothermic?			
		[1]			
(c)	(i)	Give two reasons why hydrogen may be considered to be the ideal fuel for the future.			
		[2]			
	(ii)	Suggest a reason why hydrogen is not widely used at the moment.			
		[1]			
					

Tha	Thallium is a metal in Group III. It has oxidation states of +1 and +3.						
(a)	a) Give the formula for the following thallium compounds.						
	(i) thallium(I) sulfide						
(ii)	thallium(III) chloride[1]					
(b)		allium(I) chloride is insoluble in water. Complete the description of the preparation of ure sample of this salt.					
	Ste	pp 1					
	Mix forr	a solution of sodium chloride with thallium(I) sulfate solution. A white precipitate ns.					
	Ste	pp 2					
		[1]					
	Step 3						
	Ste	ep 4					
		[1]					
(c)		en thallium(I) chloride is exposed to light, a photochemical reaction occurs. It changes n a white solid to a violet solid.					
	(i)	Name another metal halide which changes colour when exposed to light. Give the major use of this metal halide.					
		name					
		use[2]					

(ii) A piece of paper coated with thallium(I) chloride is exposed to a bright light.

Suggest two ways of increasing the time it takes for the violet colour to appear.	
ra)]

- (d) Thallium(I) hydroxide is an alkali. It has similar properties to sodium hydroxide.
 - (i) Complete the following word equation.

(ii) Complete the equation.

.....
$$TlOH + H_2SO_4 \rightarrow +$$
 [2]

(iii) Aqueous thallium(I) hydroxide was added to aqueous iron(II) sulfate. Describe what you would see and complete the ionic equation for the reaction.

observation		
		[1]
equation	Fe^{2+} + $OH^ \rightarrow$	[1]

[Total: 14]

7 Aluminium was first isolated in 1827 using sodium.

$$AlCl_3 + 3Na \rightarrow Al + 3NaCl$$

Aluminium, obtained by this method, was more expensive than gold.

(a)	Suggest an explanation why aluminium was so expensive.						
		[1]					
(b)		e modern method for extracting aluminium is the electrolysis of a molten electrolyte, minium oxide dissolved in cryolite. The aluminium oxide decomposes.					
		$2Al_2O_3 \rightarrow 4Al + 3O_2$					
	Bot	h electrodes are made of carbon.					
	(i)	Give two reasons why the oxide is dissolved in cryolite.					
		[2]					
	(ii)	Complete the ionic equation for the reaction at the anode.					
		$O^{2-} \rightarrow O_2^{} + \dots e^{-}$					
((iii)	[2] Why do the carbon anodes need to be replaced frequently?					
		[1]					
(c)	Oth	e electrolysis of a molten electrolyte is one method of extracting a metal from its ore. er methods are the electrolysis of an aqueous solution and the reduction of the oxide carbon. Explain why these last two methods cannot be used to extract aluminium.					
	eled	ctrolysis of an aqueous solution					
	usir	ng carbon					
		[2]

Ö	Nitrogen dioxide is a brown ga	is. It can be made t	by neating certain	metal nitrates.

$2Pb(NO_3)_2$	\rightarrow	2PbO	+	4NO ₂	+	0,

(a) ((i)	Name another metal whose nitrate decomposes to give the metal oxide, nitrogen dioxide and oxygen.
		[1]
((ii)	Complete the word equation for a metal whose nitrate does not give nitrogen dioxide on decomposition.
		metal nitrate \rightarrow + oxygen [1]
(b)	At n	nost temperatures, samples of nitrogen dioxide are equilibrium mixtures.
		$2NO_2(g) \iff N_2O_4(g)$ dark brown pale yellow
	(i)	At 25 $^{\circ}$ C, the mixture contains 20 $^{\circ}$ of nitrogen dioxide. At 100 $^{\circ}$ C this has risen to 90 $^{\circ}$. Is the forward reaction exothermic or endothermic? Give a reason for your choice.
		[2]
((ii)	Explain why the colour of the equilibrium mixture becomes lighter when the pressure on the mixture is increased.
		[2]

(c) A 5.00 g sample of impure lead(II) nitrate was heated. The volume of oxygen formed was 0.16 dm³ measured at r.t.p. The impurities did not decompose. Calculate the percentage of lead(II) nitrate in the sample.
