| CANDIDATE NAME | | | | |

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Paper 3 (Extended)

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part questions.

6 The distinctive smell of the seaside was thought to be caused by ozone, O₃. Ozone is a form of the element oxygen. (a) A mixture of oxygen and ozone is formed by passing electric sparks through oxygen. $3O_2 \rightleftharpoons 2O_3$ Suggest a technique that might separate this mixture. Explain why this method separates the two forms of oxygen. technique explanation [2] **(b)** Ozone is an oxidant. It can oxidise an iodide to iodine. $2I^- + O_3 + 2H^+ \rightarrow I_2 + O_2 + H_2O$ What would you see when ozone is bubbled through aqueous acidified potassium (i) iodide? (ii) Explain in terms of electron transfer why the change from iodide ions to iodine molecules is oxidation.

(iii) Explain, using your answer to b(ii), why ozone is the oxidant in this reaction.

For Examiner's Use

| (c) | It is now known that the smell of the seaside is due to the chemical dimethyl sulfide $(CH_3)_2S$. | | | | |
